

2020 On-site IPM Training Registration Form

The first step in an **Integrated Hive Management** program requires taking the time to familiarize yourself with the bees, the colony, and the pests. Protecting honey bees from pathogens and disease is an integral component of the hive management, which requires dedication to learning about disease identification, diagnosis and treatment. Therefore, beekeepers should have a basic understanding of honey bee biology (*e.g.*, bee life cycle), disease identification, prevention and control procedures.

This on-site training will cover Integrated Pest Management (IPM) principles, basic honey bee biology, pathogens (AFB, EFB, Chalkbrood, Nosema, Viruses), parasites (*Varroa* mite), pests (small hive beetle, wax moth), IPM strategies and plan. There will be hands-on interactive learning opportunities, including frames containing bee diseases and pests.

Name:					
Company name:					
Email address:					
Contact number:					
Address:					
City:		Province:		Post code:	
Training date preference:	Option 1:				
	Option 2:				
	Option 3:				
	Option 4:				
Training material language preference: <i>(CAPA disease book)</i>	English				
	Spanish				
	French				
Number of participants: <i>(max 15)</i>					
Do your workers have some level of English proficiency to allow them to understand and follow the training?	Yes				
	No				
The training will be provided in English, although Spanish can be used in some situations to help explain specific topics.					

Cost: The cost of this service will depend on your location (mileage), and whether or not we will be required to stay overnight (accommodation). After receiving your signed form, we will be in contact with you to provide you with a quote.
